Contents of Volume 68 · 2004

Arengo R → Fendrich DW
Aschersleben G → Hauf P
Aschersleben G → Schubö A

De Maeght S, Prinz W: Action induction through action observation 97

Elsner B, Hommel B: Contiguity and contingency in action-effect learning 138
Elsner B → Hauf P

Fendrich DW, Arengo R: The influence of string length and repetition on chunking of digit strings 216
Frensch PA → Ziessler M
Frith C → Roepstorff A

Hauf P, Elsner B, Aschersleben G: The role of action effects in infants' action control 115
Heuer H → Kleinsorge T
Hoffmann J → Stöcker C
Hoffmann J → Kiesel A
Hommel B, Proctor RW, Vu K-PL: A feature-integration account of sequential effects in the Simon task 1
Hommel B: Coloring an action Intending to produce color events eliminates the Stroop effect 74
Hommel B → Elsner B

Jansen-Osmann P → Richter S

Kalveram K-T → Richter S
Karlsen PJ, Snodgrass JG: The word-frequency paradox for recall/recognition occurs for pictures 271
Kiesel A, Hoffmann J: Variable action effects: response control by context-specific effect anticipations 155
Kleinsorge T, Heuer H, Schmidtke V: Assembling a task space global determination of local shift costs 31
Konczak J → Richter S
Kunde W, Wühr P: Actions blind to conceptually overlapping stimuli 199
Kunde W: Response priming by supraliminal and subliminal action effects 91

Lachnit H → Ludwig I
López-Moliner J → Tubau E
Ludwig I, Lachnit H: Effects of practice and transfer in the detection of embedded figures 277

Nattkemper D, Ziessler M: Cognitive control of action The role of action effects 71
Nattkemper D → Ziessler M

Patteri I → Riggio L
Penel A → Repp BH
Prinz W → De Maeght S
Prinz W → Schubö A
Proctor RW → Hommel B

Repp BH, Penel A: Rhythmic movement is attracted more strongly to auditory than to visual rhythms 252
Richter S, Jansen-Osmann P, Konczak J, Kalveram K-T: Motor adaptation to different dynamic environments is facilitated by indicative context stimuli 245
Riggio L, Patteri I, Umiltà C: Location and shape in inhibition of return 41
Roepstorff A, Frith C: What's at the top in the top-down control of action? Script-sharing and 'top-top' control of action in cognitive experiments 189

Scharlau I: Evidence against response bias in temporal order tasks with attention manipulation by masked primes 224
Schmidtke V → Kleinsorge T
Schubö A, Prinz W, Aschersleben G: Perceiving while acting: action affects perception 208
Snodgrass JG → Karlsen PJ
Stock A, Stock C: A short history of ideo-motor action 176
Stock C → Stock A
Stöcker C, Hoffmann J: The ideomotor principle and motor sequence acquisition Tone effects facilitate movement chunking 126

Tayama T → Tsujimoto S
Tsujimoto S, Tayama T: Independent mechanisms for dividing attention between the motion and the color of dynamic random dot patterns 237
Tubau E, López-Moliner J: Spatial interference and response control in sequence learning: the role of explicit knowledge 55

Umiltà C → Riggio L

Verwey WB, Wright DL:Effector-independent and effector-dependent learning in the discrete sequence production task 64
Vu K-PL → Hommel B

Wascher E, Wolber M: Attentional and intentional cueing in a Simon task: An EEG-based approach 18
Wolber M → Wascher E
Wright DL → Verwey WB
Wühr P → Kunde W

Ziessler M, Nattkemper D, Frensch PA: The role of anticipation and intention in the learning of effects of self-performed actions 163
Ziessler M → Nattkemper D
